ULT U250

Large yet small

The ULT U250 is Nordic Lab's largest upright freezer with a capacity of 250 litres. It is a perfect choice for convenient everyday use in the lab. This product is ideal for applications when you need a personalized freezer and at the same time have the ability to limit access to the physical samples. It fits where larger freezers do not and the size makes it more flexible, in order to place more freezers into a limited space.

Small yet safe

The ULT U250 is designed with safety in mind. It has a dual cooling compressor technology which will keep the temperature at max. -60°C if a compressor fails, which is usually only available on much bigger and more expensive freezers. Another great safety feature is the built-in data logger which stores up to 35.000 data points, which is perfect for those who need to document and save their work. The data can be downloaded easily via a USB port for documentation for further analysis.

Smart and modern design

The ULT 250 has a small foot print and can go through all standard-sized doors, which makes it very easy to install. This is simply a product with maximum capability for usage in limited spaces.
